The Senior Problem of Figuring Out Utopianism in Monks

By Shomit Sirohi

I. Simple Form of Value and Accidental Equivalent form which becomes the Pure Exchange-Form and is in fact Artistic Capital and its Greek Coinage Rendition of Precise Thebean Rule and its Complex Arguments for a Prediction from Cuba and Fidel Castro wedded to the simple cure of usually One Week, or 4 Weeks and in fact right away following Naturalism

In fact then a simple value idea is in fact to reduce the problematic status of Senior’s Last Hour – a rare section in Capital by Marx as in fact

this above footnote graph of the argument shifted to the accidental value being in GPN and Passport production the correct accidental as 3-4 days in labour-value which is precisely one week shifted to 4 days and made 1 month clearly by a rule of Marxism. And right away as also true of Marxism and Leninism. Something spontaneous.

II. The Pure Argument in Predictive Journalism

And so in fact the process of divining the case of Sirohi in this crisis at its ending therefore in Marxist fashion is in fact then a crisis of theological forms of Greek coinage and contemporary Greek living forms which then weds the problem to poetry and its two

predictions – already or the last step to freedom.

I mean here that journalism also reports on the production of truth as in fact a simple immanence in the process of transcendence recently done as films of Christian type in Sirohi’s cinema available which sees the image of a monk as depicting a Greek Arabic complexity as therefore proof of this further complex image in footnoted now edition.

That Christ is now free over the days.

I also mean that this Gospel poem is also in fact in the infinite sense the limitation of a day’s proof by higher proof in Averroes – that two marbles hit four marbles and 5 and becomes

6 and decide on their average, 3-4 days more.

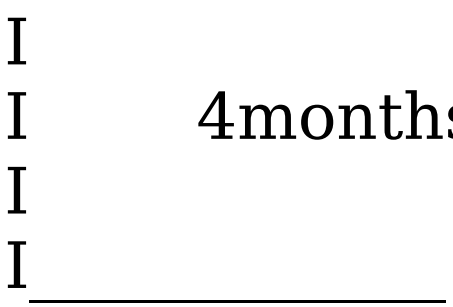
III. A Long Footnote on Marx and Poetry

And so in fact the wanton habit of people to be in the process of betting in football matches and cricket matches becomes a bookie fashion which is attacked by Sirohi, young Prophet who knows their bet as well.

If you bet, you win, but be with Christianity and such priests – who argue each day is infinite as a lesson on theology – our recent lesson was Madab – such beautiful moments come about because Christ wins.

I also mean therefore that the pure proof of bets is afterall done in that graph, and its induction is real.

I mean this graph as simple



Articulated this proves in two days, with a minor problem tomorrow, from today, but a accidental value says 4 days.

Marx announces one’s freedom and one is free he says Prophetically – and means one should know the Senior’s last problem. Quoting Marx.

IV. Senior’s Last Problem by Karl Marx (1831)

And so months have gone by, perhaps a year and Senior now is solving his crisis, he is sure he found

the mathematical answer to his crisis.
Engels edit this.

Friedrich Engels

I. Humour
II. Calculations
III. Proof in a graph
IV. Exact points
V. A point made finally
VI. Marx basically means they make no exact point till this point, they just joke and laugh on how simple it was the point they made – on a graph a game is played and they joke and produce a game of health and solve it
VII. Marx also means they are now going to be Prophetic
VIII. He finally means they pretend they don’t know one day and get it the next, precisely the day

when it is clear to them they are free.

IX. Takes – 3-4 days from proof day
